

Graham & Dunn Green Tech Group

New Green Economy, Experienced Advisors

At Graham & Dunn, we understand that sustainability is the new economy. Established and emerging companies alike must be prepared to meet the demands of new regulations and seize the opportunities that all businesses and entrepreneurs will have in this “new green economy.”

Graham & Dunn’s Green Tech Group is dedicated to representing those who bring sustainable products, services, and processes to the marketplace. To meet the growing demands for environmental responsibility, we have formed a multidisciplinary group, offering clients a hybrid of business, technical, financial and legal advisors in the areas of corporate and general business, environmental and regulatory, intellectual property, real estate finance, and tax. We help businesses succeed as they face challenges in the next decade with new laws and policies on energy.

Green technology is an expanding sector in which our clients are at the leading edge of innovation in developing and delivering solutions to the challenges of climate change, responsible use of natural resources, and other environmental concerns.

Two of our attorneys have been designated as LEED Accredited Professionals by the United States Green Building Council (USGBC). This enables us to advise clients on the incentive-based and mandatory regulatory requirements pertaining to green building and assist in evaluating and navigating the LEED certification process.

We offer experienced counsel and forward-looking solutions in constructing legal and business strategies related to energy generation, renewable energy, portfolio standards, climate change policy, carbon regulation, and other environmental regulation and compliance.

Graham & Dunn has been an integral part of the Pacific Northwest community for over 100 years, and is a leader in the community supporting a clean environment.
